

Storyline

Investigation One	Part One	Part Two	Part Three	Part Four
<p data-bbox="281 500 422 529">The Force</p>	<p data-bbox="562 354 905 532">What kinds of materials do magnets stick to? What happens when you bring two or more magnets together?</p> <p data-bbox="579 610 888 675">Investigating Magnets and Materials</p> <p data-bbox="564 721 898 932">Students will use magnets to determine which items will stick or will not stick. They also discover that magnets either attract or repel.</p>	<p data-bbox="953 354 1287 607">How do magnets interact with other objects? Does an iron object have to touch a magnet to become a temporary magnet? Does magnetic force go through all materials?</p> <p data-bbox="982 646 1262 711">Investigating More Magnetic Properties</p> <p data-bbox="953 756 1287 1040">Students observe that steel objects can become a temporary magnet when they come in contact with a magnet itself. Magnetic force acts through materials with the exception of iron.</p>	<p data-bbox="1339 354 1665 461">How can we measure the force of attraction between two magnets?</p> <p data-bbox="1369 539 1635 568">Breaking the Force</p> <p data-bbox="1339 613 1665 932">Students will use a balance and washers to measure the force of attraction between two magnets. They will also investigate the force of attraction as the distance between the two magnets increase.</p>	<p data-bbox="1722 354 2047 461">Can you figure out where two magnets are taped in a box without looking?</p> <p data-bbox="1734 539 2034 604">Detecting the Force of Magnetism</p> <p data-bbox="1719 649 2045 857">Students will explore sealed boxes to determine where the magnets would be located inside the box using a magnet on the outside of the box.</p>

Investigation Two	Part One	Part Two	Part Three	Part Four
<p data-bbox="205 461 491 495">Making Connections</p>	<p data-bbox="562 318 905 565">How can you get electricity from a source to a receiver? Where do connections need to be made? How does electricity flow through a circuit?</p> <p data-bbox="625 607 842 641">Lighting a Bulb</p> <p data-bbox="569 683 898 784">Students will use trial and error to explore simple circuits.</p>	<p data-bbox="957 318 1287 565">How can you get electricity from a source to a receiver? How is the motor circuit like a light bulb circuit? How is it different? What does a switch do in a circuit?</p> <p data-bbox="972 607 1272 641">Making A Motor Run</p> <p data-bbox="957 683 1287 857">Students will use a circuit to make a motor run and they will add a switch to control the flow of electricity.</p>	<p data-bbox="1339 318 1669 492">Can any of the test objects complete a circuit? How much of the classroom environment is made of conductors?</p> <p data-bbox="1346 573 1661 641">Finding Insulators and Conductors</p> <p data-bbox="1352 651 1654 857">Students will build a circuit and test objects throughout the room to determine whether they are conductors or insulators.</p>	<p data-bbox="1734 500 2032 568">Investigating Mystery Circuits</p> <p data-bbox="1755 610 2018 857">Student work with mystery boards to reinforce concept of conductors and their understanding of electricity flowing through a circuit.</p>

Investigation Three

Advanced Connections

Part One

Can you get two bulbs to light at the same time?
Can you make two lights bright in a series circuit?

Building Series Circuits

Students will find ways to operate more than one component in a circuit. They also find that it takes two D-cells to make lights brighter.

Part Two

Can you light two bulbs brightly with just one battery? How many different ways can you wire a parallel circuit?

Building Parallel Circuits

Students will build parallel circuits and find that many bulbs can operate on a single D-cell.

Part Three

Which design is better for manufacturing long strings of tree lights--- series or parallel?

Solve the String-of-Lights Problem

Students will use their knowledge of circuits to solve the problems customers may have when using a string of lights.

Investigation Four

Current Attractions

Part One

Can you make a magnet that turns on and off?

Building an Electromagnet

Students will discover that when you wrap insulated wire around a steel core and current flows through it, the steel core will become a magnet.

Part Two

How does the number of winds of wire around a core affect the strength of the magnetism?

Changing Number of Winds

Students will continue with their observations of the insulated wire around the steel core. They will change the number of winds to see if it will affect the strength.

Part Three

How can the strength of an electromagnet be changed?

Investigating More Electromagnets

Students propose and investigate other ways to change the strength of the electromagnet.

<p>Investigation Five</p> <p>Click It</p>	<p>Part One</p> <p>Can you use your knowledge of electricity and electromagnetism to reinvent the telegraph?</p> <p>Reinventing the Telegraph</p> <p>Students apply their knowledge of electromagnetism and circuits to build a telegraph and send messages to each other.</p>	<p>Part Two</p> <p>Can you connect two telegraph systems to send messages back and forth to another group?</p> <p>Sending Messages Long Distance</p> <p>Students use their knowledge of the previous lesson to send messages back and forth to each others telegraphs.</p>	<p>Part Three</p> <p>Students ask their own questions and plan investigations or research to answer them.</p> <p>Choosing Your Own Investigation</p> <p>Students use their knowledge of magnets and electricity for further investigation.</p>
