

Today I found out that there are 5 different kingdoms. They are animals, plants, fungi, protists, and bacteria. I learned that a living thing is made of cells. Many of the kingdoms are producers and consumers. The animals are a producer and a consumer. So is the protists and the bacteria. The plants are a producer and the fungi is a consumer. The word "consumer" means that it absorbs food from other organisms. And the word "producer" means that it makes its own food.

? I wonder what mold looks like? Does it contain cells?

Prediction I think that it will have no cells because it might not be living.

Grade 3-5 Life Science Example #1

| NGSS: PE | NGSS: DCI | NGSS: SEP | NGSS: CC | CCSS: ELA | CCSS: MATH |
|----------|--|-----------------------------|----------|-----------------|------------|
| 3-LS1-1 | LS1.B: Growth and Development of Organisms | Developing and Using Models | Patterns | RI.3.7 W.3.8 | MP.2 |

the guppies swim
around in the aquarium
and it's like fun to see
the guppies and the
snails they goes and the
baby guppies are more
littir then the dad and
mom guppies.

Grade 3-5 Life Science Example #2

| NGSS: PE | NGSS: DCI | NGSS: SEP | NGSS: CC | CCSS: ELA | CCSS: MATH |
